

Auto Filling Services

Auto Filling Services on-site mobile fueling program maximizes your company's operational efficiency and fleet management. With today's pressures to lower cost and risk while increasing productivity and efficiency, Auto Filling Services offers you a fueling solution that can do just that. Whether you have 1 or 500 vehicles, our team of experts can assist you in developing a custom fueling program that will save your company time and money.

- **We deliver fuel directly to your fleet at a time convenient to your business, day or night.**
- **Your drivers spend more time on the road—keeping your drivers and your vehicles more productive.**
- **Vehicle level fuel replenishment data allows for ease in managing your fleet.**
- **Customized online reporting links allows accurate and timely fuel management.**

Barcode Scanning

Our onboard computer and meter system allows us to be very accurate in the amount of fuel that we deliver to our customers. Each delivery is completed with a computer generated ticket that reads directly from the meter and can be presented to the customer so that they know exactly how many gallons they have received. This system reduces the possibility for human error in our delivery process and provides our customers with the best service possible.

Furthermore, this system can be specifically tailored to our customers who own and operate a fleet of vehicles. This unique system allows us to scan your vehicles using a barcode that is placed directly on the vehicle. Once this barcode is in place on a vehicle our drivers can program that barcode to read the vehicles license plate or unit number. This process then allows our customers to identify how much fuel each vehicle or piece of equipment is using over a given time period as well as the total number of gallons used by the entire fleet.

“Auto Filling Services is known for outstanding quality, exceptional value, and service.”
